

AUTOMAZE · SEPTEMBER 2026

The governed factory. ■

A new CTO-as-a-Service offer. Senior engineers govern the work.
The factory writes the code. The client stays in control.

FOR INTERNAL USE

AI made code cheap. Judgment is still scarce.

THE PROVEN MODEL

Today: full service

\$8k+ a month per client

We pay developers and tokens

Scope agreed before we can sign

THE NEW OFFER

New: the governed factory

The factory writes and tests the code

Seniors sign off plans and review every change

The ticket queue is the scope – no SOW

Three roles. Clear ownership.

PRODUCT DECISIONS

The client decides

What gets built

Approves the feature spec

Approves shipping

ENGINEERING DECISIONS

We govern

Technical sign-off on every plan

Written review verdict on every change

CTO advice on the weekly sync

EXECUTION

The factory builds

Code, tests, staging, proof video

Deploy with health checks and rollback

Ladybug watches production

Every ticket passes two human gates.

Ladybug

Recurring production errors get investigated and a fix PR prepared – then the same loop. Never auto-shipped.

Protected operations

Auth, billing, data migrations and secrets need an extra explicit approval.

Two needs. One factory.

"SOMETHING IMPORTANT IS RUNNING"

Steady

**\$1k / month,
fixed**

Engineering backup for a working product

Ladybug, fixes, security updates

Sign-off and review in 2 business days

"I HAVE THINGS I WANT BUILT"

Active

**\$5k / month,
list**

Weekly CTO sync + 2 extra CTO
hours

Continuous factory execution

Sign-off in 1 business day

BEFORE EITHER PLAN

MVP / Factory Readiness

**From \$5k
one-time**

Tests, CI/CD, staging, design system

Complex or new products: \$10–15k

The plan starts when the first ticket
runs

No scope of work. No lock-in.

The queue is the scope

No SOW to negotiate before we sign. Shorter sales cycle, no fixed-price risk.

Month to month

No minimum term. 30 days' notice. Readiness is paid as its own product.

Active loyalty pricing

1% off per month on Active, up to 10%. Frozen on Steady. Lost if they leave.

Special terms per deal

One editable section for instalments or pilot pricing – set before each send.

Similar margins. A much bigger market.

~\$4–5k

Monthly profit on a grandfathered \$8k full-service client

~\$3.5–4k

Monthly profit on an Active client at \$5k

~1/2

A senior's month per Active client, at ~45 min per ticket

Active isn't a cheaper full service. It wins clients who could never pay \$12.5k – that's new money, not a swap.

The proven model stays.

Existing clients

Grandfathered at ~\$8k. That's well below the new \$12.5k list price.

Full service

Stays, from \$12.5k a month – the "don't worry about it" package.

The homepage

automaze.io keeps selling what works today.

Plan moves

A client moving to Active is a conversation. Leaving means losing the grandfathered rate.

A quiet test on factory.automaze.io

Not linked from the homepage. Run as a campaign. We agree the bar up front: hit it and it moves to the homepage. Miss it and it stays small.

REF	SUCCESS CRITERIA
C1	# of Clients signed by a set date
C2	Margin per client and per plan
C3	Senior time per ticket
C4	Factory → senior escalations
C5	Senior → principal escalations
C6	SLA performance and rollbacks

The real ceiling is judgment.

METRIC 1

Factory → senior

How often machine execution needs a human engineer. Sets our capacity and fair use.

METRIC 2

Senior → principal

How often a senior still needs Ran-level architecture calls. This is the one that decides scale.

If most tickets stop at the senior layer, the model scales. If not, we've built an efficient consultancy – not a factory.

A table saw doesn't make a carpenter.

One idea across X, Instagram and LinkedIn: same builder, with and without judgment in the loop. We lead with the promise, not the warning.

Automaze

@automaze · Promoted

We build software with AI every day. Writing the code is now the easy part.

Deciding what to build, and knowing it's safe to ship, still takes a senior engineer. That's the part we sell.

Build with AI. Ship like a senior team.

factory.automaze.io

AD 1 · X

AUDIENCE

Founders and technical builders already using AI tools.

ANGLE

Experience-led, told as "we". The link card carries the headline.

automaze Sponsored

FIG. 01 · THE WORKSHOP

**Buying a table saw doesn't
make you a carpenter.**

Keep the AI. Add the carpenter.

AI plus senior engineers who sign off every plan and review every change.
From \$1,000 a month. No hiring.

AD 2 · INSTAGRAM

AUDIENCE

Non-technical founders who think AI
replaces the team.

ANGLE

The analogy, visual first. Price in the caption,
not the image.

Automaze

Promoted

Many AI-built apps stall between demo and production. We make yours factory-ready – tests, CI, staging – then every change ships with a senior engineer's sign-off. No scope of work. No hiring.

LOCALHOST → PRODUCTION

It works on localhost. Now what?

factory.automaze.io

[Book a call](#)

AD 3 · LINKEDIN

AUDIENCE

Builders with a vibe-coded app stuck before production.

ANGLE

The localhost problem. Factory Readiness is the entry offer.

Next steps, we decide together.

-
- 01 Agree the success criteria and a date
 - 02 Delivery team designs the daily sign-off and review routine
 - 03 Run the internal driver test on real tickets
 - 04 Solicitor review of the new agreement
 - 05 Talk to existing clients before anything reaches the homepage
